

Make ready time preparation in the IBERICA AG blankers

To have the possibility to use the IBERICA AG blanker die cutter machine as a die cutter with standard delivery, (sheeter) IBERICA AG has developed the new generation of blanking tools.

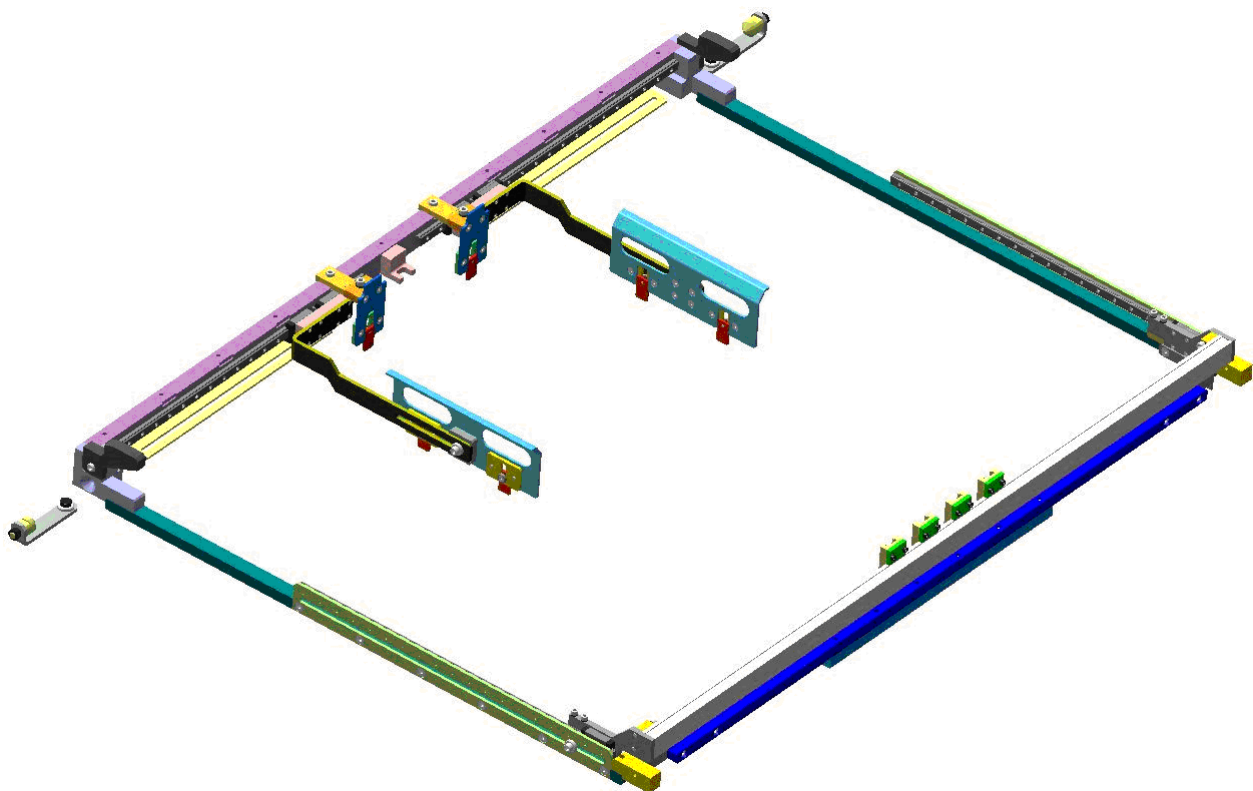

The new upper blanking tool, the Impuls®BCN, is a combination of retractile pushers in a maximum format surface. The operator just needs to select the pushers required to push down the sheets.

The Impuls®BCN tool will be fixed in the new generation of Quick Lock System die frames, or in a standard upper frame in case of an old generation IBERICA blankers.

The new Lower Universal Frame is the perfect tool to prepare a non-blanked job in a easy way and reducing the make ready time. The operators just need to fix the Universal Frame into the Lower Blanking Frame and to adapt the lateral joggers to the desired format.

With this new technology, the IBERICA AG customer can reduce the make ready time in one hour.

The customer will be also able to eliminate the storage of spare parts and accessories, and the risk of damage due to accessories failure will be completely eliminated.

Lateral adjustable Jogger

Rear adjustable Jogger
