

# **Pantera** Adhesive Binder

A Compact Adhesive Binder with Big Possibilities

**MÜLLER MARTINI**

# Pantera Adhesive Binder

## Wide Range of Sizes and Flexible Binding Options

**With its compact design, the Pantera adhesive binder not only provides great flexibility in tight spaces... it now handles PUR binding, in addition to conventional hotmelt, for the lower performance range. Pantera covers an extensive range of sizes to accommodate the widest variety of jobs.**

**Perfect binders and gathering lines can be set-up separately for different jobs due to separate servo-driven shafts. The Pantera is easy to operate with a comprehensive touchscreen. If the adhesive binder is equipped with AMRYS (the Automatic Make-Ready System), setup and changeover times can be reduced even further.**

### **Advantages of the Pantera adhesive binder:**

- ▶ Wide range of sizes
- ▶ Variety of gluing and binding processes
- ▶ Short make-ready and changeover times
- ▶ Simple and comprehensive operation
- ▶ Interactive setup assistant companion
- ▶ Flexibly expandable
- ▶ Optionally with AMRYS

### 1 Control

The Pantera is easy to operate, using a touchscreen. The menus are clear and comprehensive. The interactive setup assistant companion supports the operator, also in the case of manually adjusted machines without Amrys. Settings for all stations are displayed on the screen for the current production.

The setup assistant companion supports the following tasks:

- Saving and loading of repeat jobs
- Display of production data and settings
- Monitoring the glue pot and back-spinner temperature
- Automatic glue length control for spine and side gluing

### 2 1571 Gathering Line

The efficient and reliable gathering machine features easy operation and quick, tool-less setup. The hoppers can be loaded from both sides. The line is equipped with Asac (Automatic signature thickness measurement) and optionally with Asir (Automatic Signature Recognition).

### 3 Reject Gate

The gate ejects all faulty and incomplete books automatically, without interrupting production. This significantly increases the productivity of the adhesive binder.

### 4 Infeed

The infeed on the Pantera is equipped with a manual infeed, enabling the simple feeding of pre-gathered or thread-sewn book blocks. The horizontal infeed in the binder is equipped with a jogger table which jogs the signatures to the spine.

### 5 Clamps

The clamps adjust automatically to each book block thickness between 2 and 50 mm, the clamps also create the same pressure with any thickness of the book block. Thanks to the quick-opening mechanism, book blocks are easy to remove.

### 6b Spine Preparation

In the flexible spine preparation station, the leveling saw, notching knife and fiber rougher can be used according to the glue (PUR or hotmelt). Dust is removed from the book spine with a brush which ensures improved page adhesion.

### 6a Milling Station

The book block is reliably processed in the milling station with a dust miller. The station can also be equipped with the "AngleNotch" tool which increases pull resistance values considerably

especially for coated paper and difficult products through the hooking effect. The milling station can be lowered quickly for processing thread-sewn products.

### 7a Spine Gluing Station

The spine gluing station is equipped with two application rollers and a counter-rotating backspinner. The backspinner provides uniform glue application, and consequently, provides good page adhesion in the book.

Glue application length and spot-gluing can be adjusted via the interactive setup assistant companion.

### 7b Side Gluing Station

The length of the glue application can be precisely adjusted to the cover size with the control companion. This feature prevents glue contamination of the binder.

### 7c Premelting Device

A free-standing premelter can be used as an option. With level control in the glue pot, the premelter ensures that there is always sufficient glue, preventing production interruptions. Premelter devices are available for both hotmelt and PUR.

### 7a Spine Gluing, PUR Option Glue Pot

Capacity volume is optimized for processing PUR. High binding quality is ensured thanks to the monitoring of glue temperature and glue level. The system can be easily cleaned and operated.

The open glue application system is simple to manage. For cleaning, the PUR glue pot can simply be removed from the trolley. Moveable glue trolleys make quick glue changes simple during production changeovers.

### 8 Crash Station (Option)

The crash station can be adjusted via the setup assistant companion. If no book is in the clamp, crash is inhibited automatically.

### 9a Drum Cover Feeder (Option)

The drum cover feeder has a large cover capacity. Thanks to individually adjustable suckers, all cover types (even those with flaps) can be optimally processed. The covers are separated and fed securely using side blow air and separating aids. A low level monitoring device and a refill warning are available.

### 9b Flat-Pile Cover Feeder

The space-saving flat-pile cover feeder is loaded from the top. The secure feeding of covers is controlled via photocells. If no book is in the clamp, no cover is fed. The cover can be scored twice or four times, and scoring width and depth can be fine-tuned during production. Residual pile monitoring is provided. The cover feeder can be changed over quickly, without tools.

### 10 Cover Nipping

Precisely concurrent cover nipping provides for impeccably pressed, sharp-edged book spines. The covers are positioned, with high accuracy, to the book spine. The pressing plates are Teflon coated and can be cleaned very easily if contaminated with glue. The plates are simple and quick to remove, thanks to their quick locking system.

13

### 11 Product Lay Down

Products are carefully delivered in the lay down area. The system can be configured for left or right delivery and is designed for all glue types.

### 12 Delivery

The delivery removes the products carefully from the binder. Utilizing a custom-tailored transport belt system, the bound books are led into the three-knife trimmer, as well as into

the book stacker, and, to further addressing and packaging processes. Removal occurs streamed or individually, and can be coupled with the binder speed.

### 13 Esprit Three-Knife Trimmer

The Esprit is the ideal three-knife trimmer for use with the Pantera. Esprit features high trimming quality and processes a wide range of products. Esprit can be quickly set up and changed over thanks to motorized adjustments.

### **Printing Presses**

Automated web printing presses with inline finishing and a wide array of sizes provide consistent print quality. Orders placed once can be easily reproduced and therefore more quickly processed.

### **Press Delivery Systems**

Efficient and reliable solutions are demanded by press delivery systems: Transporting printed signatures, rotary trimming, log or bundle formation, palletizing, forming rolls. The ideal link between press and print finishing.

### **Saddle Stitching Systems**

A complete range of saddle stitchers, inserting, film-wrapping and packaging systems – in a wide array of performance classes – automate print finishing. Modern systems manufacture products in first-class quality with great added value.

### **Softcover Production**

Adhesive binding lines in all performance classes produce a wide range of spine-glued products such as brochures, magazines, catalogs and paperback books... in perfect quality at the highest speeds.

### **Hardcover Production**

Hardcover machines, whether connected inline or as individual units, master all the processing steps needed to create finished books from folded signatures with hard covers and protective jackets.

### **Newspaper Mailroom Systems**

Powerful and flexible mailroom systems transport and process freshly printed newspapers fully automatically, from the press through the inserting process, bundling and up to the loading ramp.

### **Books-on-Demand**

With the first industrial total solution for Book on Demand (BoD), printed products are produced in a single pass... from pre-press data through digital printing to the finished, adhesive-bound or saddle stitched product.

This brochure may show components that are not part of the standard equipment and are available as options only. In some cases, protective covers in photographs have been removed or opened for illustrative purposes. Design and equipment configuration are subject to change.
